

TECHNICAL BULLETIN 020

Subject: Plunger Retaining Screw Eccentric

The G8 Driving Slide Assembly has been redesigned to include a new Eccentric Plunger Retaining Screw and Eccentric Driver Slide Plunger. These new parts work together to allow the Driving Slide Assembly, which drives the Driver Bar and Driver, to be adjusted for variations in the stroke. In addition, this new Driving Slide Assembly will make DeLuxe Stitcher Heads compatible with heads that have a 49mm driving stroke.

The new Driver Slide Plunger Eccentric and Plunger Retaining Screw Eccentric fit in your existing Driver Slides, but the entire Assembly, complete with the two new parts, is also available.

Refer to the following diagram and part numbers when ordering these replacement parts:

- G20162BA - Driving Slide Assembly
- G20164B - Driver Slide Plunger, Eccentric
- G20169B - Plunger Retaining Screw, Eccentric
